

THE FUTURE OF DAIRY HYGIENE IS HERE

Sanicleanse Auto is the follow on from the Sanicleanse Teat Scrubbers, where we can now use the proven success of this technology to introduce a labour free product which provides consistency with every milking and peace of mind knowing the routine is being carried out the same on every cow in every milking.

Dairy farmers are faced daily with challenges and one of the most time-consuming and difficult is finding skilled labour needed to work on the farm and with the cows. Northern Dairy Equipment is applying its expertise in robotics and AI to create a new solution to automate an extremely important task within the milking parlour, freeing up labour hours for other tasks.

Sanicleanse TeatScrubbers are currently being used daily in 68 countries with an estimated number of cows being prepped every day with this equipment to be around 2.9 million up to 3 times per day. Northern Dairy Equipment has spent over 17 years developing products for teat preparation and brushing technology. Expansive knowledge has been used to produce this new product along with knowledge of the correct chemical solutions, dilution rates and water temperatures to achieve the best results possible for the dairy farm.

**FLEXIBLE LEASE AND FINANCE OPTIONS ARE AVAILABLE

HOW IT WORKS

Sanicleanse Auto use a live tracking camera that utilises 3D vision to identify teat locations and carry out the wash and dry routine in a fast pace routine. The arm identifies teat location quickly and accurately which in turn enhances animal welfare with consistent results every time

- ✓ Utilises a hot water/chemical mix that kills all masitis-causing pathogens
- ✓ Touchscreen control unit and remote access for engineers and farm owners/managers
- ✓ AirPrep feature - blows air across teats during the drying phase
- ✓ The robot is suspended from a steel pillar to enhance the life cycle and enable washdowns to be completed

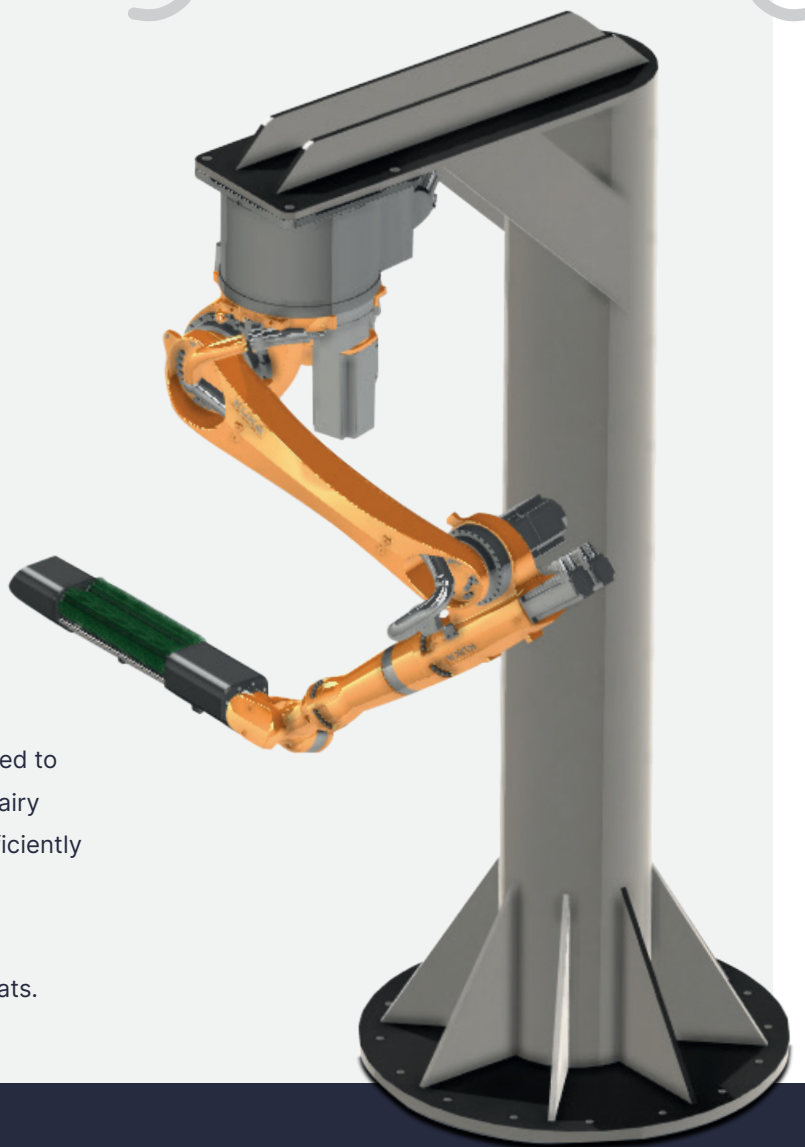

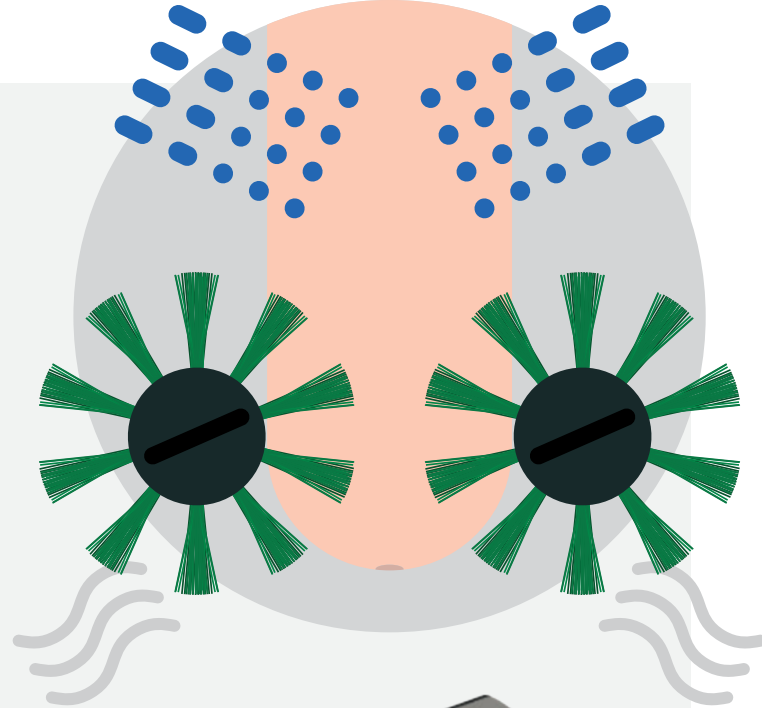

THE BENEFITS

- ✓ Target mastitis, bactoscans and SCC's
- ✓ Reduces manual labour
- ✓ Save time & money - eliminate towels
- ✓ Improve teat condition & herd health
- ✓ Extreme reliability and long-lasting brushes

SANICLEANSE AUTO SOLUTION

A highly concentrated chlorine dioxide solution formulated to ensure the complete sanitisation of the cow teats and dairy equipment. It achieves a total kill that works fast and efficiently to help improve on farm results.

The optional emollient-based product can be added for additional teat conditioning or cleaning heavily soiled teats.
